

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Cancelled)
2. (Cancelled)
3. (Cancelled)
4. (Cancelled)
5. (Currently amended) A multifilament yarn comprising a linear polylactic acid resin with a relative viscosity  $\eta_{rel}$  of 2.7 to 3.9, a Sn content of 0 to 30 ppm, a residual monomer content of 0 to 0.5% by weight, ~~and an inert content of less than 3%~~, prepared from lactic acid monomers wherein at least 98 mol% of the lactic acid is an L-isomer, and wherein said yarn has a tensile strength of 3.9 cN/dtex or more and a contraction ratio in boiling water of 12% or less, and an inert content of less than 3%.
6. (Currently amended) A multifilament yarn comprising a linear polylactic acid resin with a weight average molecular weight  $M_w$  in the range of 120,000 to 220,000, a number average molecular weight  $M_n$  in the range of 60,000 to 110,000, a Sn content of 0 to 30 ppm, a residual monomer content of 0 to 0.5% by weight, ~~and an inert content of less than 3%~~, prepared from lactic acid monomers wherein at least 98 mol% of the lactic acid is an L-isomer, and wherein said yarn has a tensile strength of 3.9 cN/dtex or more and a contraction ratio in boiling water of 12% or less, and an inert content of less than 3%.
7. (Previously presented) A multifilament yarn according to claim 5 having a birefringence,  $\Delta n$ , of 0.030 or more, and a thermal stress peak temperature of 85°C or more.

8. (Cancelled)
9. (Previously presented) A process for producing a polylactic acid resin multifilament yarn using a linear polylactic acid resin with a relative viscosity  $\eta_{rel}$  of in the range of 2.7 to 3.9, and an inert content of less than 3% prepared from lactic acid monomers wherein at least 98 mol% of the lactic acid is an L-isomer, and wherein the resin contains 0 to 30 ppm of Sn and 0 to 0.5% by weight of residual monomer wherein the process steps comprise: spinning the resin at a speed in the range of 3,000 m/min to 5,000 m/min; drawing at a draw magnification factor 1.3 times or more at a temperature in the range of 100°C to 125°C; and heat-setting at a temperature in the range of 125°C to 150°C.
10. (Previously presented) A process for producing a polylactic acid multifilament yarn, with an inert content of less than 3%, using a linear polylactic acid resin with a weight average molecular weight  $M_w$  in the range of 120,000 to 220,000 and a number average molecular weight  $M_n$  in the range of 60,000 to 110,000, prepared from lactic acid monomers wherein at least 98 mol% of the lactic acid is an L-isomer, and wherein the resin contains 0 to 30 ppm of Sn and 0 to 0.5% by weight of monomer wherein the process steps comprise: spinning the resin at a speed in the range of 3,000 m/min to 5,000 m/min; drawing at a draw magnification factor of 1.3 times or more at a temperature in the range of 100°C to 125°C; and heat-setting at a temperature in the range of 125°C to 150°C.
11. (Previously presented) A process for producing polylactic acid multifilament yarn using the polylactic acid resin according to claim 5 wherein drawing is between a first heated roller (1) and a second heated roller (2) followed by heat-setting with the second heated roller (2).
- 12.-77. (Cancelled)
